SUMMARY

Self-motivated Computer Science undergrad with hands-on experience in full-stack web development, open-source contributions, and modern frameworks like React, Next.js, and Node.js. Seeking opportunities to apply my skills in building scalable and impactful applications.

TECHNICAL SKILLS

Languages & Tech: Java, JavaScript, TypeScript, C, Python, SQL, PostgreSQL, HTML, CSS

Frameworks & Libraries: ReactJS, NextJS, NodeJS, ExpressJS, Tailwind CSS, Shadcn UI, Framer Motion

Libraries & Tools: Git, Postman, Clerk, MongoDB, Appwrite, Figma

EDUCATION

JAIN (Deemed-to-be-University)

Bangalore, India

Bachelor of Engineering in Computer Science and Engineering | CGPA: 8.2/10

2022 – 2026

Relevant coursework: OOP, DBMS, Operating System, APIs, Data Structures and Algorithms

EXPERIENCE

Academic Project – Expense Tracker

Mar 2025 – Apr 2025

- Developed a full stack expense tracking app that allows users to securely manage and categorize their spending.
- Utilized **React.js**, **Express.js**, **MongoDB**, **Node.js**, and **JWT authentication** for a secure and responsive interface.
- Integrated features like chart visualization (Recharts), file upload (Multer), and real-time notifications (react-hot-toast) for enhanced user experience.
- Result:** Improved personal finance monitoring; reduced manual expense tracking time by 40%.

Open Source Contributor - Leetcode Whisper Chrome Extension

Nov 15 - 2024

- Contributed to the **Leetcode Whisper** Chrome Extension by YouTuber Pyush Garg, a tool planned to assist developers with coding prompts and solutions.
- Designed the **Pop-up UI** of the extension, enhancing the user experience upon clicking the extension icon.
- Participated in code reviews and testing discussions during contribution.
- Result:** Pull request successfully merged, improving the overall interface and usability of the extension.

PROJECTS

AI Resume Analyzer

July 2025 – Present

- Built a full-stack AI-powered resume analysis platform that provides real-time feedback and ATS score based on job descriptions.
- Implemented resume upload, PDF-to-image conversion, and feedback generation using Claude 3 via **Puter.js**.
- Enabled file storage, key-value caching, and AI interaction through cloud-based **Puter API**.
- Result:** Automated resume review experience that mimics recruiter analysis and improves job readiness.

Drive: File Management System

Dec 2024 – Jan 2025

- Built a Drive clone enabling file uploads, sharing, and intuitive folder navigation with a clean user experience (UX).
- Applied **OTP-based user authentication** to ensure robust security and smooth access management.
- Tech stack: **TypeScript**, **Next.js**, **Appwrite**, **Tailwind CSS**, and **Shadcn UI**.
- Result:** Delivered a seamless and efficient file management system with enhanced user experience and security.
